

EMR FOR OB/GYNs

Established In 2002, digiChart EHR, is purposefully designed for OB-GYN ambulatory clinics and has been shaped by expertise and direct input from hundreds of seasoned practitioners.

Why digiChart EHR

digiChart EMR was built for OB/ GYNs - by OB/GYNs. We understand the unique demands of the OB/GYN practice and developed a solution to work the way you work.

Recognizing the distinctive needs of the OB-GYN field, we've integrated user-friendly features for prenatal and gynecological care, streamlining the workflow in a way that's intuitive for specialists.

From tracking pregnancy stages to efficiently managing women's health preventive care, digiChart EHR is not just another piece of software; it's a tool forged in the crucible of real-life medical practice.

Making Documentation Easier

Workflow

digiChart EHR is the only EHR that mimics the workflow in the OB/GYN practice, improves clinical decision-making, and gives all providers the same level of documentation capabilities, rules, alerts, and reminders to enhance patient care.

Electronic Access to Antepartem Record

digiChart EHR incorporates the complete Antepartum record (forms A through U) and the progress note in the EHR - meaning that data is entered once. No manual transcription is needed.

Reduce Patients Wait Times

With our integrated portal, patients communicate their medical history before office visits, leaving you more time to spend on exams, treatment plans, and counseling. 35% of patients use the portal within the first week and 85% within the first six months.

No More Templates

Quickly select diagnoses, procedures, medications, and education materials for each type of encounter. Easily order and e-prescribe your own set of frequently used medications. digiChart comes preloaded with dozens of easy-to-edit clinical treatment plans covering most women's health issues.

The ability to access patient charts from anywhere improves my ability to handle patients, particularly high-risk patients. We have been able to attract new patients to our practice by using cutting-edge technology.
